## DETAILED ACTION

### *Double Patenting*

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 6-11 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-6 of prior U.S. Patent No. 6,625,427. This is a double patenting rejection.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2682

Claims 1-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,625,427. Although the conflicting claims are not identical, they are not patentably distinct from each other because it is considered that the apparatus previously patented produces and thereby obviates the method of the instant invention.

***Allowable Subject Matter***

3. Claims 1-11 would be allowable if rewritten or amended to overcome the rejection(s) under statutory type (35 U.S.C. 101) double patenting rejection and nonstatutory double patenting rejection, set forth in this Office action.

The following is an examiner's statement of reasons for allowance:

The Admitted Prior Art in view of Cabot disclose a radio transmission apparatus for performing radio transmission by use of carrier frequencies, comprising: signal processing system, each including a signal generator configured to generate a signal having one of the carrier frequencies, an amplifier configured to amplify the signal generated by the signal generator, and a variable band-pass filter configured to receive an output signal from the amplifier and to pass the signal of one of the carrier frequencies; a filter controller configured to control a pass band of each variable band-pass filter according to each respective signal having one of the carrier frequencies and generated by the respective signal generator; a combiner configured to combine signals output from the variable band-pass filters of the signal processing system into a

Art Unit: 2682

transmission signal. However, none of prior arts of record mentions a fault detector configured to detect a fault of each variable band-pass filter and a transmission controller configured to stop an operation of a signal processing system having the signal generator, the amplifier, and the variable band-pass filter in which the fault of the variable band-pass filter is detected by the fault detector.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
